

pale slim ghost synthesisers

parakeets

Three square wave oscillators modulated by each other and a fourth, low-frequency oscillator create glitchy, noisy, semi-rhythmic bleeps, squawks and chords.

Unbalanced stereo line level output; needs an amp, or tiny low-impedance earphones.

Designed and hand-built in Nunhead and Greenwich. Based on the 65noisebox by Simon Wright.

Limited edition: #1 of 1.
